Introduction

AXEPTA BNP Paribas allows you to accept payments using different payment methods. Each of them offers different possibilities, through an ecommerce platform, such as:

- Standard payment
- One click payment
- Recurring payment.

Prerequisites

Required **php** version of the server should be :

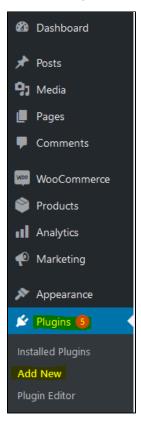

The plugin supports versions from 5.7 to 8.8.X

Multi-store or multi-currency configrurations are not possible with this module.

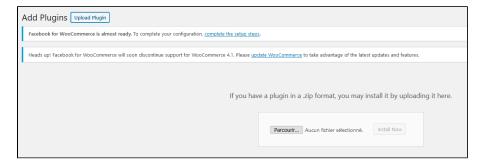

Installation of the plugin

The installation of the plugin requires the following steps:

1) Go to the "Plugins" tab from the left side of the backoffice and click on « Add »

On the next screen, click on "Upload plugin" and upload the plugin. Once uploaded, click on "install now".

Once the plugin installed, you can disable or delete it.

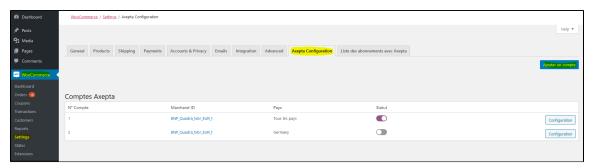

2) Back to "Plugins" > "Installed plugins" from the menu on the left of the screen, find the "Axepta Online BNP Paribas" plugin by scrolling through the list or searching for "Axepta" on the search bar.

Global configuration of the plugin

To create a new configuration, go to the tab "WooCommerce" > "Settings" on the left side of the screen.

Click on the tab "Axepta configuration" to display the list of all your configured accounts and add others.

To add a new account, click on the "Add account" button (Ajouter un compte)

You should, then, fill the required data provided by BNP Paribas and click on "Save".

Once the configuration saved, you can click on "configuration" to manage the different payment methods and functionalities you would like to activate on your shop.

The payment methods that are displayed are the ones corresponding to your activation key.

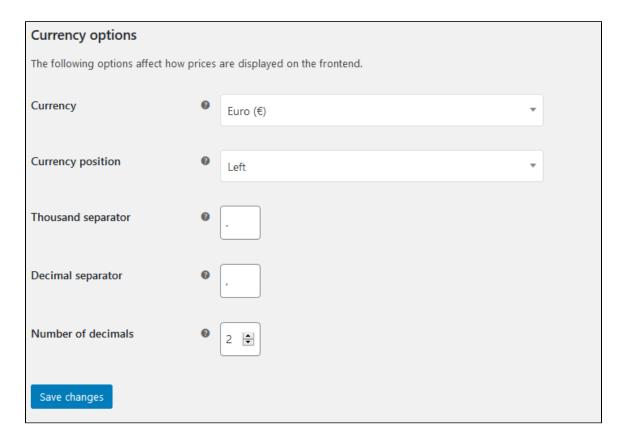

The payment methods in grey correspond to those that are not part of your offer. You have the possibility to visualize the complete offer in order to see everything that the Axepta module proposes.

You can now configure your account options.

Currency:

The currency indicated is the currency of your activation key. This data cannot be modified, it is only shown as an indication for the management of the account.

Please note that you must activate the currency beforehand in the woocommerce backoffice. To do this, go to "WooCommerce" > "Settings" > "General" and find the tab "Currency options'.

Country:

You can choose to activate the account either in all countries or in manually selected countries by holding down the ctrl key.

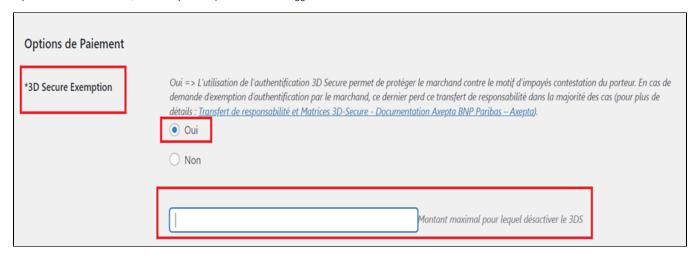

3DSecure and exemption management :

The 3DSecure is still activated on your store, you can nevertheless activate the "Exemption request" option which will allow you to request an authentication exemption for the cardholder during a simple payment on your merchant site.

To enable exemption requests, please select "Yes" in the "Exemption request" box to disable please select "No"

If you wish to activate exemption requests you must then fill in the "Amount" box which corresponds to the maximum amount that will trigger an exemption r equest. Above this amount, the exemption request will not be triggered.

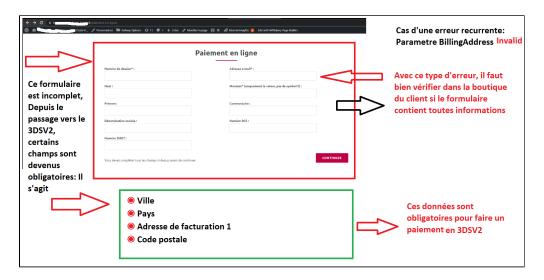

Attention: Please note that the use of 3D Secure authentication protects the merchant against the reason for unpaid invoices "holder dispute". In the event of a request for exemption from authentication by the merchant, the latter loses this transfer of responsibility in the majority of cases (For more details: Liability shift and 3DS Matrix - Documentation Axepta BNP Paribas - Axepta). This is a request for exemption, this does not mean that it will be granted systema tically by the issuer of the cardholder's card. Exemption requests only work with transactions paid in Euro.

Known error: Since switching to 3DSV2, it is imperative to send the parameter "BillingAddress" to Axepta to make a payment.

This parameter contains the following data:

- City
- Country
- Billing Address 1
- Postal Code

These fields are mandatory for the module to function properly and must be present in the payment form:

One-click payment:

This option allows you to activate the oneclick payment via registration of the payment method by the user in his customer account.

Subscription:

This option allows you to activate the subscription payment on the shop.

Rendering mode:

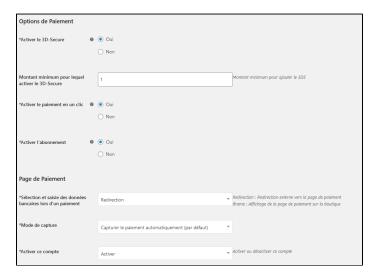

The display of the payment page is possible in 2 ways with the plugin:

- Redirection => External redirection of the user to the payment page
- iFrame => Displaying the payment page on the shop in an iFrame

Capture method:

This option allows you to choose the payment capture method:

- Automatic => The capture will be done automatically in the night.
- Manual => After a defined time, you can choose just after choosing this option the delay before the capture (Delay in hours before capture (integer between 1 and 696)).

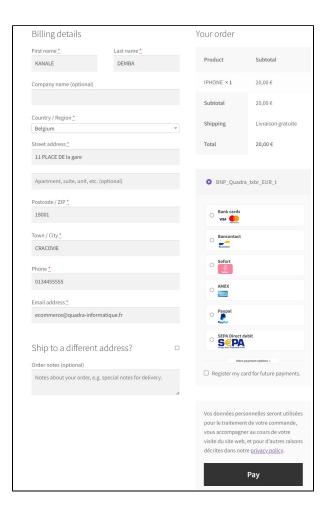

Your account is now configured.

You can configure as many accounts as your BNP Paribas contract allows. To add an account, you must go to "Axepta payment configuration" and do the same operations. The list of accounts will be updated with each new registration.

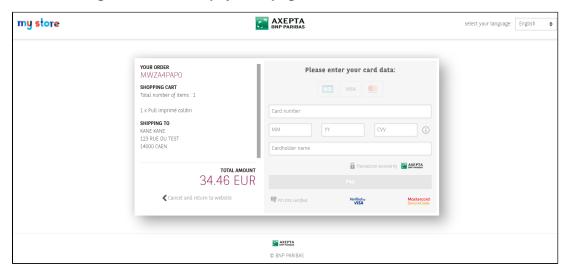

You can also disable a configuration.

The render of the checkout page

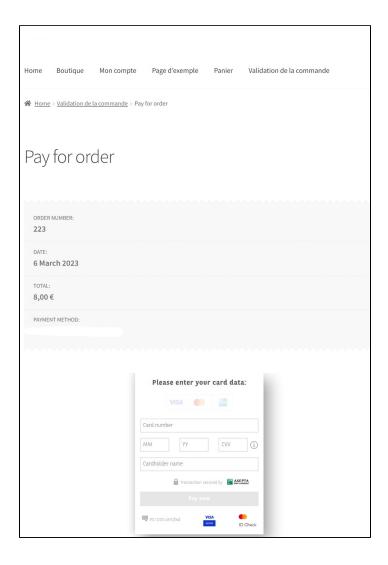

Payment methods are displayed on a framework for 6 proposals. Additional payment methods can be accessed by selecting "More payment options", which only appears if necessary. The "One-click" option is activated here to offer the registration of the card of the user.

The rendering of a redirected payment page

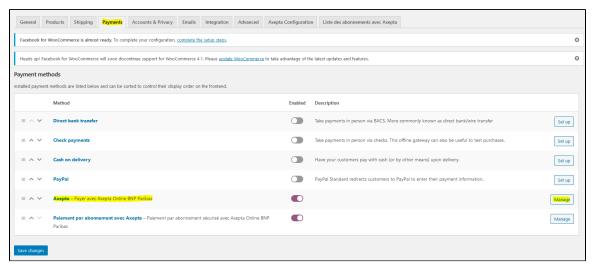

The rendering of an iFrame payment page

Payment modes configuration

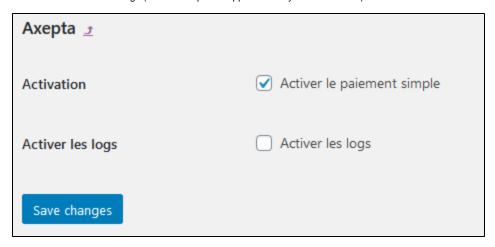

One-off payment

To activate the one-off payment, you must go to "WooCommerce" > "Settings" > "Payments" on the left side of the screen, and check "Axepta".

When you click on the button on the right side, you can configure the payment by checking the "activation" box.

You can also enable the logs (this can help the support to analyse transactions).

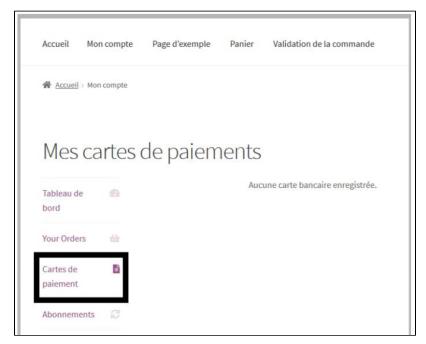

One-click payment

This functionnality allows your customers to save their payment methods data so that they can pay faster the next time.

You need to make sure that this option is enabled in your configuration ("WooCommerce" > "Axepta Configuration" > "Configuration" of the MID of your shop.

The customer will be able to manage his saved cards in his personal account in the "My saved cards" tab:

Subscriptions

Enable Subscription

You need to make sure that this option is enabled in your configuration ("WooCommerce" > "Axepta Configuration" > "Configuration" of the MID of your shop.

Configuration

When the subscription functionality is enabled, it's possible to configure items to pay by subscription.

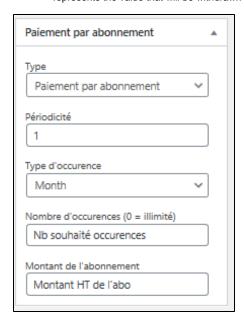

To do so, you should configure every item that can be paid by subscription, individually. Go to the menu on the left side of your screen > "Products" and search for the product you would like to configure by writing its name or scrolling the list.

To pay for a subscription product, it is mandatory to have a customer account. For guest mode customers who have a subscription product in their cart, the creation of a customer account is requested before making the payment.

On the product sheet (when you click on the name of the product), you can go to the "pay by subscription" tab on the bottom right side of the screen.

And you can configure the following information:

- Type : indicates if the item will be paid by subscription or standard payment.
- Periodicity: indicated the type of subscription (monthly or daily)
- · Interval occurrence: Number of times that the payment will be proceeded. If this value is not filled, the occurrence is unlimited.
- Recurring amount: Indicated the amount of the item in subscription, so this value can be different from the initial price of the item. This value
 represents the value that will be withdrawn in the future transactions.

Subscriptions management

On the tab "Woocommerce" > "Settings" > "Listes des abonnements avec Axepta", you can visualize all your subscriptions and have access to the following data:

Customer name

Product ordered

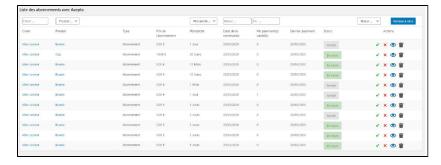

Amount

Periodicity

Order date

Number of payments proceeded

Subscription status

Available actions in this section are:

Enable a subscription

Disable a subscription

Check détails about an order

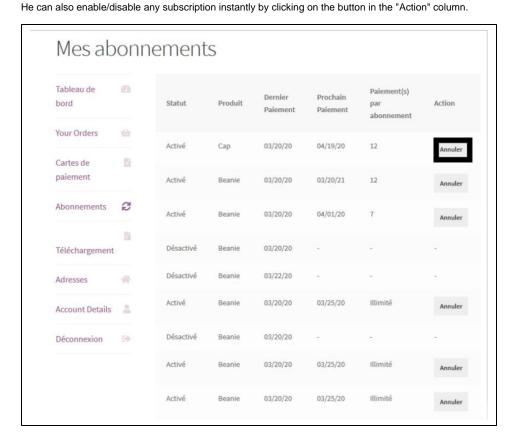

Delete a subscription

Actions

Subscription management (user view / Front office)

The customer can also manage his subscriptions in his personnal account via the tab "My payments with subcription".

The subscription's status will be updated automatically on the backoffice.

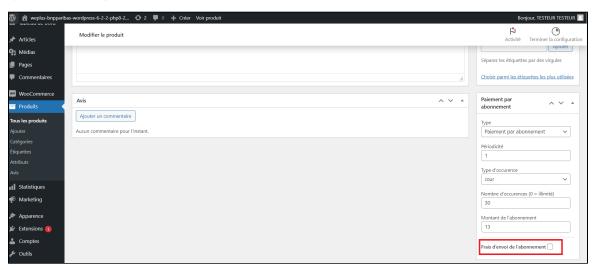

Payment of delivery costs for recurring subscriptions by the Axepta BNP Paribas module

This feature makes it possible to cover delivery or transport costs on recurring subscriptions, taking into account the delivery zones already configured on the store.

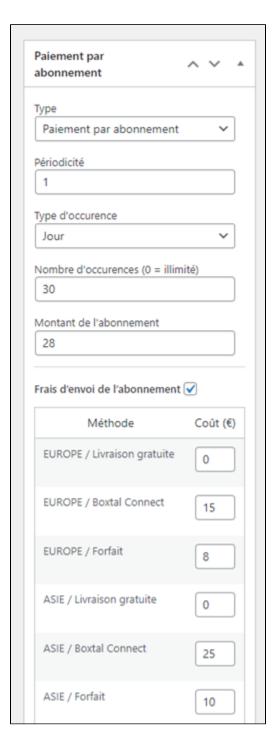

Product configuration:

Go to the product page of your subscription: in the right column, in the box «Payment by subscription», a field «Subscription shipping costs» appears. This option is unchecked by default.

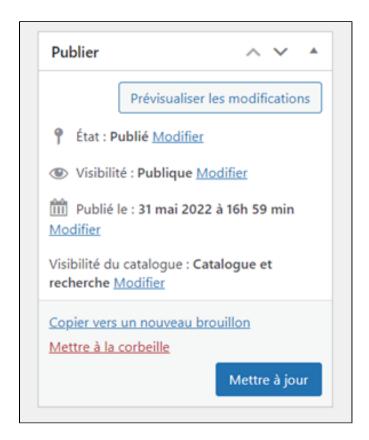

Configuration of delivery rates for recurring subscriptions:

By checking the «Subscription shipping costs» box, several fields appear, depending on the delivery zones configured on the shop. You can set different shipping costs depending on the delivery methods and areas.

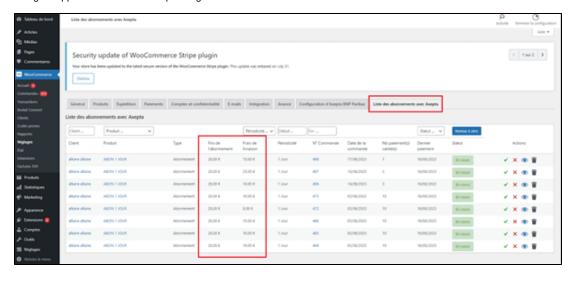

After entering the shipping prices, update the product to save the changes by clicking "Update" in the "Publish" box at the top of the right column.

Control of subscriptions:

To check that the shipping costs have been taken into account, go to WooCommerce > Settings > Subscription list with Axepta. A column "Delivery charges" appeared with the corresponding amount.

Transactions management

The complete list of transactions paid with different payment methods is available on the transactions tab: "Woocommerce" > "Transactions". You will get, for every transaction, the following information:

Transaction's date

Payment method's brand

Transaction ID

Order's reference

Merchant's Id

Pay ID

XID

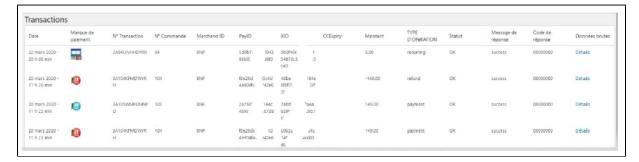

Amount

Transaction's type (one-off payment, cancellation, refund, recurring payment...)

Status(success, failure, authorization...)

Response code

Details

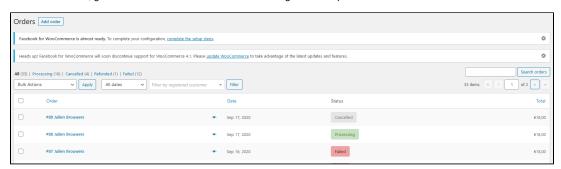

When you click on "Details" you will have additional information about the transaction (useful to analyze a transaction by the support)

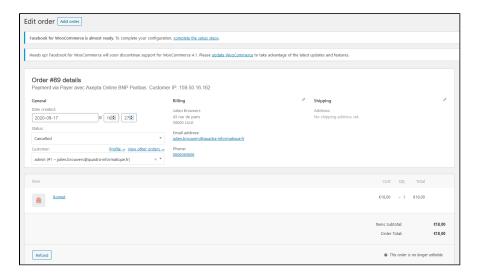

Refund/ cancellation

To make a refund, go to "Woocommerce" > "Orders". You will get the complete list of orders.

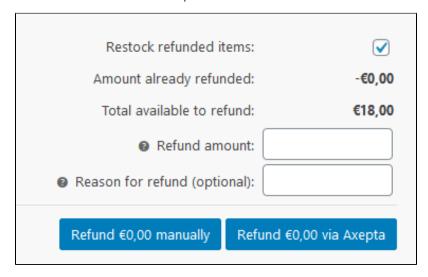

Once you select one order (by clicking on the name), you will get the following screen:

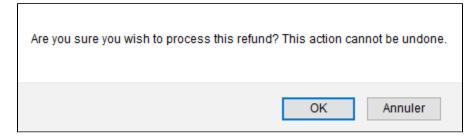

When you click on "Refund", a new tab will appear allowing you to fulfill information about the refund:

- Amount : total amount or partial amount to refund. (The amount indicated can't be higher the total amount)
- Reason : this information is optional.

You can now validate the refund.

The transaction is now refunded.

And the status is automatically updated to "remboursée".
