

Basics of Base64-encoding EN

The JSON-objects are Base64-encoded and the result is then passed as the value with the corresponding key.

Please pay attention to pass the complete Base64-encoded string as value including the padding characters ("=" or "==") that are used by [Base64-encoding](#).

Please find here some examples:

Key	JSON-structure you would like to pass	Key and value you have to submit
card	<pre>{ "securityCode": "569", "expiryDate": "202208", , "cardholderName": : "William Thomas", "number": : "4186665161011901", "brand": "VISA" }</pre>	card=ewogICAgInNlY3VyaXR5Q29kZSI6IC11NjkiLAogICAgImV4cGlyeURhdGUiOiAiMjAyMjA4IiwKIICAgICJjYXJkaG9sZGVyTmFtZSI6ICJXaWxsaWFtIFRob21hcylsCiAgICAibnVtYmVyljogIjQxODY2NjUxNjEwMTE5MDEiLAogICAgImJyYW5kljogIiZJU0EiCn0=
