

Account verifications

Description

This feature allows you to check the validity of a card by performing a 0 euro authorization.

Prerequisites

- You offer your clients payment by card
- You wish to store card data in the form of the pseudo card number (PCNr) and only validate the customer's card.

Implementation

The request for Account verification may be carried out where:

- The payment form hosted by AXEPTA BNP Paribas - See [Create a card payment](#)

Request

 The following table describes the **additional** parameter that must be added to the payment request:

Parameter	Format	CND	Description
paymentMethods.card.eventToken	enum	O	Authorized value: ACCOUNT_VERIFICATION

Example of an Account verification request

```
...
  "amount": {
    "value": 0,
    "currency": "EUR"
  },
...
...
  "paymentMethods": {
    "type": "CARD",
    "card": {
      "eventToken": "ACCOUNT_VERIFICATION"
    }
  }
...

```
