

Merchant Data

The "Merchant Data" section of the back-office displays the administrative and technical information linked to the merchant account. This data is essential for merchant identification, payment channel configuration, and the management of both test and production environments.

Portail marchand

This page is typically accessible via the "Administration" menu or directly through the merchant selection dropdown.

Merchant Account Details

The "Account Data" panel includes the following fields :

Field	Description
Active	Indicates whether the merchant account is currently active or disabled.
Merchant Name	The merchant's registered name on the platform (e.g., <i>AXEPTA PRODUCT TESTING</i>).
Creation Date	The date and time the merchant account was created in the system.
Last Modified Date	The date and time the account information was last updated.
Customer Number	Unique identifier assigned to the merchant.
Merchant Category Code (MCC)	Classification code identifying the merchant's business activity (e.g., 2222).
Active Simulation Mode	Indicates whether the account is set to simulation/test mode.
Inactive Simulation for APMS	Allows disabling simulation mode for alternative payment methods.

Force Send from MIT	Enables transaction sending from <i>Merchant Initiated Transaction (MIT)</i> mode.
Email Recipients	List of email addresses receiving notifications related to transactions.
Email Language	Language used for automatic notification emails (e.g., English, French, etc.).
Channel	Integration channel used by the merchant (e.g., ECOM, MOTO, etc.).

Associated Features

- **Merchant Selector:** allows switching between merchants in multi-merchant environments.
- **Read-Only Mode:** the data displayed cannot be directly edited; only administrative users can modify it.
