

3DS 2.0 Guidelines

How to use our 3DS 2.0 Technical documentation ?

1. Refer to the integration methods that you already have implemented or you want to implement : [3DS 2.0 Integration Methods - Documentation](#)
[BNP - Axepta](#)

For each integration method, you will find a detailed table containing the mandatory and optional fields for the payment request.

2. Please note that the payment request for 3DS 2.0 is a mix between **Key-Value Parameters** (already used if you have integrated AXEPTA solution) and **JSON objects**. All JSON Object must be **Base64 encoded**.
3. You will find an example of a 3DS 2.0 request via this link : [3DS 2.0 Example request](#)
4. During the integration phase, in the table of each integration method, the JSON object will be defined and will redirect to the [JSON Object](#) section
