AXEPTA payment page Overview

When the user arrives on the payment part of the merchant site, he will first have to select the payment method with which he wishes to pay.

To do this, the merchant can choose the **Axepta BNP Paribas payment page** with several display options for the selection of payment methods.

	BNP Paribas payment page		
Payment method display options	Display 1 View card payment only	Display 2 Highlighting the card and providing a drop-down menu that offers alternative payment methods .	Display 3 Display of the Logos of all payment methods that the merchant wishes to offer.
Endpoint	PaySSL.aspx	PaymentPage.aspx <i>For card payment with alternative payment methods, display 3 is set by default. Contact BNP Paribas Support to activate display 2.</i>	Default view
Customization	• Customizable fields, also called CustomFields (details on the <i>cart</i>, <i>details on the buyer...</i>) & Logo • Dynamic parameters (languages, template...) • Creation of a customized template		

Merchant payment page

If the merchant wants to create and host his own payment page, he can use the so-called 'Silent Post' [Merchant Credit Card Form - Silent Order Post \(PayNow.aspx\)](#) integration and the [endpoints of the payment methods](#) he wishes to offer.

The BNP Paribas payment page

Checkout page languages

The BNP Paribas standard payment page is available in several languages : French, English, German, Spanish, Portuguese, Italian, Dutch ... The full list is available in the table below (dynamic parameters).

The default language of the payment page corresponds to the one previously used by the user on the merchant's site. However, the user has the possibility to change the language, once arrived on the payment page thanks to a drop-down menu, at the top right of it.

Payment method selection page

The Axepta Online solution offers 3 page display options for selecting payment methods:

1. A page offering payment by card only
2. A page offering the card and alternative payment methods with a focus on card payment
3. A page offering the card and alternative payment methods

Payment by cards only

This payment page is suitable for merchants who only wish to offer cards to their users (CB, Visa, MasterCard, Amex ...).

To make a card payment via the payment solution form, use the URL below:

<https://paymentpage.axepta.bnpparibas/payssl.aspx? ...>

The general parameters for building the card payment request via the form on the payment page are documented in the card payment guide.

The screenshot displays the AXEPTA BNP PARIBAS payment interface. At the top, the AXEPTA BNP PARIBAS logo is on the left, and a language selection dropdown set to 'Français' is on the right. The main content area is divided into two columns. The left column, titled 'VOTRE COMMANDE', shows the order number '2018_1234', the cart contents 'VOTRE PANIER' (Sport Shoes, size 45), the user's coordinates 'VOS COORDONNÉES' (CustomField5), the delivery address 'ADRESSE DE LIVRAISON' (CustomField5), and a header 'HEADER' (Custom Text). At the bottom of this column, the 'MONTANT TOTAL' is displayed as '50 EUR'. A link at the bottom left allows the user to 'Annuler votre panier et revenir à la boutique'. The right column is titled 'Veuillez saisir votre numéro de carte:' and contains a card payment form. The form includes a large input field for the 'Numéro de carte', three smaller input fields for 'Mois exp', 'Année exp', and 'CV', and a field for 'Nom sur la carte'. Above these fields are logos for various payment methods: CB, Visa, MasterCard, American Express, Discover, and JCB. Below the form, a security notice states 'Transaction sécurisée par AXEPTA pour merchants'. A large 'Payer maintenant' button is positioned below the security notice. At the bottom of the right column, there are logos for 'certification PCI DSS', 'Verified by VISA', and 'Mastercard SecureCode'.

Highlighted card payment

This page is enriched with a drop-down menu offering alternative payment methods (PayPal, IDEAL, Sofort, Wechat ...) for a merchant who wants to highlight the card but opens other possibilities for his users.

The URL for this page is:

<https://paymentpage.axepta.bnpparibas/paymentPage.aspx?...>

1. When the buyer chooses to pay by card, the payment request will be automatically directed to the card payment URL (payssl.aspx).
2. When the buyer chooses another payment method from the drop-down list, he will be redirected to the page specific to the chosen payment method (refer to the manual of each available payment method).

To activate this display, the merchant must contact BNP Paribas Support:

- Phone: 0 800 25 62 25
- Mail: bnpparibas@computop.com

Payment by cards and alternative payment methods

This page offers the logos of all available payment methods: the merchant does not put forward any payment method and leaves the total choice to its users.

This page allows you to display the logos of the different payment methods, to make a payment via this payment page, use the URL below:

<https://paymentpage.axepta.bnpparibas/paymentPage.aspx?...>

The user will be automatically directed to the URL specific to the payment method he has chosen.

By default, this checkout page appears to the merchant. To rearrange the order of the payment methods displayed, simply configure them in the desired order in the template - [Create a custom template](#).

What are the checkout page integration options ?

Option	Redirection	iFrame	Lightbox/Pop-up	Mobile device
Overviews				
Assets	- Easiest integration - Little development on the merchant's side	- The buyer remains on the merchant site: known and trusted environment - The payment funnel is fluid and cart abandonment is rare.	The buyer finds himself on a payment page that is superimposed on the merchant site which will capture his attention.	Customer journey fully integrated into the mobile application developed by the merchant according to the chosen payment method.
To note	from the merchant site to the payment page = > exit of the purchase funnel	If a visitor refreshes the page of the site, the payment data is erased and the payment journey is to start again from the beginning.	Some browsers can block pop-ups	Payment can be made via a browser.

The choice to display the payment page as a redirection, pop-up or iFrame is up to the merchant.

Redirect payment page

This option consists of redirecting the buyer to the secure payment page. This is a simple and secure option.

The page is responsive and can be customized to the colors and image of the site which blurs the breaking effect. The addition of the site logo, colors and fonts give the buyer the impression of staying on the same environment.

It is also possible to completely customize the design of the payment page: [Implementation of a Custom Template](#)

iFrame payment page

This option allows the buyer to stay on a known and trusted environment. The payment funnel is fluid and cart abandonment is rarer. This course still has some disadvantages that must be taken into account before integrating the iFrame mode on its site. Indeed, unlike redirection, if a visitor refreshes the page of the site, the payment data is deleted. The payment process has to start again from the beginning.

The documentation for integrating the iFrame payment page is available here: [Setting up the iFrame](#)

Pop-up payment page

This option, also called "lightbox", refers to a secondary window that appears in front of the main navigation window. The buyer does not have the impression of leaving the merchant's site and finds himself on a superimposed page. This will be automatically closed once the payment has been made.

Mobile device payment page

This option offers a fully integrated path perfectly adapted to the smartphone/tablet environment. The payment solution is compatible with iOS and Android environments

How do I customize the payment page?

Customizable Fields & Logo - CustomFields

When the merchant decides to use the standard BNP Paribas page, he can insert his own logo and customize up to 9 specific fields called dynamic or customizable fields.

By default, BNP Paribas proposes to use them to value the following data:

	Key	Format	CND	Description
1	CustomField1	ans..50	O	Amount and currency of the transaction
2	CustomField2	ans..50	O	Order's number
3	CustomField3	ans..50	O	Merchant's logo URL of the logo (recommended size is 200x100 pixels)
4	CustomField4	ans..50	O	Order's description
5	CustomField5	ans..50	O	Buyer's information
6	CustomField6	ans..50	O	Shipping information
7	CustomField7	ans..50	O	Delivery information
8	CustomField8	ans..50	O	Name of a new field added by the merchant
9	CustomField9	ans..50	O	Value of a new field added by the merchant
