

AVS - Address verification

Please contact [Axepta helpdesk](#) to activate this feature on your MID.

Scope

This feature is only available for cardholder from UK, USA and Canada.

Visa and Mastercards

Request

i The following table describes the **additional** encrypted payment request parameters described below for "interface via form" and "interface via Server-to-Server" :

Key	Format	CND	Description
TransID	an..12	M	TransactionID which should be unique for each payment
RefNr	an..12	O	Merchant's unique reference number, which serves as payout reference in the acquirer EPA file. Please note, without the own shop reference delivery you cannot read out the EPA transaction and regarding the additional BNP settlement file (CTSF) we cannot add the additional payment data.
AddrStreet	ans..30	O	Street name of the customer (for AVS)
AddrStreetNr	ans..30	O	Street number of the customer (for AVS)
AddrZip	ans..10	O	Postcode of the customer (for AVS)
AddrCity	ans..20	O	Town/city of the customer (for AVS)
AddrCountryCode	n3	O	Customer's country code according to ISO-3166-1 numeric (3-digits) (for AVS)

Response

Address Verification can be performed on a number of card schemes, subject to Issuer and Acquirer support. The result is returned as a code within the parameter **Match**. Following tables explain the meaning of the result values from different Acquirers.

Following AVS parameters are returned for via **CB2A**:

Code for „Match“	Description
A	Postcode and address fully match
B	Postcode and address partially match
C	Postcode and address do not match
D	Control was not performed or was not performed for all data elements

American Express

Request
