

# TransactionId

## TransactionId

### English

**Common notes** on TransactionId:

- The TransactionId is **completely different** than the TransId:
  - the [TransId](#) is **provided** by **you** to identify a request sent by you to
  - the TransactionId is **provided** by an **external** service provider (like credit card schemes / providers, PayPal, PPRO, ...)

### Credit cards:

The TransactionId is a reference returned by card schemes or external CC providers to identify a credit card on their side.

- **with** "MsgVer=2.0" (i.e. used to initiate a payment with 3-D Secure 2.x - including fallback 3-D Secure 2.x -> 3-D Secure 1.0)
  - the [schemeReferenceId](#) is returned **instead** of the TransactionId
  - you will use [JSON Objects](#) in combination with [schemeReferenceId](#) for [Recurring card payments \(Subscription\)](#)
