

Tests

Test modes

Several test modes are available

Each test mode has a specific use :

- **BNP_DEMO_AXEPTA** allow to test your technical integration for AXEPTA BNP Paribas solution and test **authentication response codes**
- **BNP_XXXXX_t** shop allow to test your technical integration and test **authorization response codes**
- The **'Simulation' mode** allow to test **real response from authorisation server**

The scope of testable functionalities is available in the section [Test modes](#)

Testing

MID

Axepta Online provides a Demo MID for 3DSV2 testing and validate technical integration - for further details : [3DSV2 Test environment](#)

Once the onboarding on Axepta payment solution is done, the merchant receives a test ID (MID test - BNP_XXXXXXXXXX_t) used to perform tests and a production MID. This mode only allows testing on authorizations (no authentication).

Cards

According to the tests needs, several kind of test cards are available :

- [Test Cards - Authentication](#)
- [Test cards - Authorization](#)

Switch to live mode

In order to carry out real transactions in production (authorization, remittance, settlement), the merchant must use his production MID supplied once onboarding is done.
